

Helicon

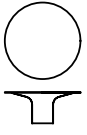

Kensaku Oshiro, 2026

The Helicon table is born from the encounter between technical mastery and visual perception. A thin spun metal sheet takes shape in a continuous profile which, beneath the glass surface, generates an unexpected visual depth. The eye is guided toward the center by a fluid curve that seems to open the space, creating an almost hypnotic optical effect. The glass top becomes a transparent threshold: not merely a functional surface, but an element that reveals the table's internal construction and amplifies its poetic dimension. The metal, crafted with precision, transforms into a light gesture that invites the gaze to explore the form.

Helicon

Table with a base made from a spun metal sheet, shaped to form a continuous surface that generates a central cavity. The structure is lacquered in the matte colours of the Desalto collection. The glass top allows the internal geometry of the base to be observed, revealing the optical depth effect created by the spun metal sheet.
